Introduction

Full stack engineer with 1+ years of professional and 2+ years of freelance experience building web applications.

Technologies

Frontend: React.js, Next.js, TailwindCSS, ShadCN UI, Zustand

Backend: Node.js, Express.js, Prisma ORM, REST APIs, Langchain, Firebase

Database: MongoDB, PostgreSQL, Redis, Supabase

DevOps: Git, Github, Github Actions, Docker

Work Experience

Full Stack Engineer, HUZL.IN – Remote

June 2025 – Present

- Implemented backend systems for Hustler Development Program (HDP - contest) and session-based booking features used by platform users.
- Designed data models for sessions, availability, and recurring schedules, supporting flexible booking flows.
- Created activity feed with follow/unfollow system, handling high-frequency updates and fixing race condition issues.
- Optimized data queries using MongoDB aggregation and transactions to improve consistency and reliability across operations.

Freelance Full Stack Developer, Kaiz La – Remote

Sept 2025 – Nov 2025

- Developed landing page and chatbot interface enabling users to explore product features and interact with the system.
- Implemented a retrieval-based chatbot using OpenAI and Pinecone to generate context-aware responses.
- Set up data ingestion pipelines to convert company information into embeddings for efficient lookup.
- Integrated scheduling and email workflows using Calendly to enable direct user-to-expert interaction.

Freelance Full Stack Developer, Dignify A Girl – Remote

Nov 2024 – May 2025

- Built an AI-based resume platform for generating structured, ATS-friendly resumes.
- Enabled resume-job comparison through job description analysis to highlight gaps.
- Created an AI assistant to review resumes and suggest improvements.
- Handled subscription payments with Stripe and added job recommendations based on user data.

Projects

CodeX:Code Editor

Live

Tech Stack: Next.js, TypeScript, Node.js, Supabase, Redis, MongoDB

- Created a browser-based code editor supporting multi-language execution using Monaco Editor and Piston API.
- Built project file management with Supabase, enabling users to store, edit, and export code files.
- Integrated AI assistant using code context to help with debugging, suggestions, and improvements.
- Implemented Redis-based caching and rate limiting to handle traffic and prevent API abuse.
- Added subscription model to manage feature access and support usage-based workflows.

Live

PostMyGig: Freelance Gig Sharing Platform

Tech Stack: Next.js, Node.js, TypeScript, MongoDB, Redis, Socket.IO

- Created a platform for freelancers to share excess work and collaborate with other freelancers.
- Implemented real-time chat using Socket.IO with a dedicated Node.js backend.
- Added activity feed to track actions like gig posting, hiring, and user interactions.
- Applied Redis caching to improve response time for frequently accessed data.

Education

Chandigarh University, Master of Computer Application (MCA)

CGPA: 8.6

Aug 2024 – July 2026

Babu Banarasi Das University, Bachelor of Computer Application (BCA)

CGPA: 8.2

July 2021 – Aug 2024
