Introduction

Full stack engineer with 1+ years of professional and 2+ years of freelance experience building web applications.

Technologies

Frontend: React.js, Next.js, TailwindCSS, ShadCN UI, Zustand

Backend: Node.js, Express.js, Prisma ORM, REST APIs, Langchain, Firebase

Database: MongoDB, PostgreSQL, Redis, Supabase

DevOps: Git, Github, Github Actions, Docker

Work Experience

Full Stack Engineer, HUZL.IN – Remote

June 2025 – Present

- Engineered backend systems for contest management and session-based booking flows for platform users.
- Architected scalable data models for availability and recurring schedules, enabling flexible and robust booking workflows.
- Created an activity feed with a follow/unfollow system, resolving critical race conditions to ensure real-time data accuracy.
- Optimized data queries using MongoDB aggregation and transactions to improve consistency and reliability across operations.

Freelance Full Stack Developer, Kaiz La – Remote

Sept 2025 – Nov 2025

- Developed a modern landing page and an interactive chatbot UI, driving user engagement with product features.
- Engineered RAG chatbot using OpenAI and Pinecone vector database for highly accurate, context-aware responses.
- Established automated data ingestion pipelines to convert company documents into vector embeddings for efficient search.
- Integrated Calendly and automated emails to seamlessly convert bot interactions into direct user-to-expert meetings.

Freelance Full Stack Developer, Dignify A Girl – Remote

Nov 2024 – May 2025

- Developed a complete AI-powered SaaS platform for generating structured, ATS-optimized resumes.
- Designed an analysis engine to compare user resumes against target job descriptions, automatically highlighting skill gaps.
- Integrated an AI assistant that reviews resumes and provides real-time, actionable improvement suggestions.
- Implemented Stripe for secure subscription billing and a personalized job recommendation feed based on user profiles.

Projects

CodeX:Code Editor

Live

Tech Stack: Next.js, TypeScript, Node.js, Supabase, Redis, MongoDB

- Built a web IDE using Next.js and Monaco Editor, integrating the Piston API for secure, isolated code execution.
- Implemented cloud storage workflows via Supabase, enabling users to seamlessly save, edit, and export projects.
- Integrated Google GenAI to provide real-time code analysis, automated inline debugging, and intelligent fix suggestions.
- Secured API endpoints by implementing rate-limiting with Redis, preventing spam and ensuring platform performance.
- Developed a tiered subscription system to monetize the platform and manage access to premium AI features.

Live

PostMyGig: Freelance Gig Sharing Platform

Tech Stack: Next.js, Node.js, TypeScript, MongoDB, Redis, Socket.IO

- Architected a full-stack B2B gig-sharing marketplace using Next.js 15 to connect freelancers with clients.
- Built a real-time messaging microservice using Socket.IO and Node.js to handle instant user communication.
- Designed role-based dashboards for seamless management of gig postings, applications, and the overall hiring lifecycle.
- Implemented complex MongoDB aggregation pipelines and transactions to ensure data consistency.
- Deployed automated backend cron jobs to seamlessly manage project statuses and expire outdated gigs.

Education

Chandigarh University, Master of Computer Application (MCA)

CGPA: 8.6

Aug 2024 – July 2026

Babu Banarasi Das University, Bachelor of Computer Application (BCA)

CGPA: 8.2

July 2021 – Aug 2024
